SUMMARY

Python Backend & Full Stack Developer focused on building web applications and REST APIs using Python, FastAPI, Flask, PostgreSQL, and Redis. Experienced in backend development, database integration, authentication, caching, third-party API integration, and full-stack application development. Also experienced with React, Next.js, TypeScript, and Flutter for building responsive web and mobile applications.

SKILLS

Languages: Python, JavaScript, SQL

Backend: FastAPI, Flask, REST APIs, JWT Authentication

Databases: PostgreSQL, Redis

Frontend: React, Next.js, TypeScript, Tailwind CSS

AI / ML: Scikit-learn, NumPy, AI / LLM Integration

Tools: Git, GitHub, Docker, Vercel

PROJECTS

CineBrain | *Python, Flask, PostgreSQL, Redis, JavaScript*

🌐 Live 🐙 Code

- Full-stack entertainment platform for discovering movies, TV shows, and anime with personalized content recommendations.
- Developed backend services using Flask and PostgreSQL, including REST APIs, database operations, authentication, and user review functionality.
- Integrated Redis for caching, TMDB API for external media data, and Cloudinary for media delivery.
- Implemented JWT-based authentication and structured backend error handling across application workflows.

Savlink | *Python, Flask, PostgreSQL, Redis, React*

🌐 Live 🐙 Code

- Full-stack personal web library for saving, organizing, and searching bookmarks using folders and tags.
- Built backend services with Flask and PostgreSQL for data management, authentication, and application workflows.
- Used Redis for caching and developed the frontend with React, Tailwind CSS, and responsive UI components.

Manga Reader | *FastAPI, PostgreSQL, Redis, React, Flutter*

🌐 Live 🐙 Code

- Cross-platform manga reading application with web and mobile clients connected to shared backend services.
- Developed backend services using FastAPI with PostgreSQL for persistent user and reading data and Redis for caching.
- Implemented APIs for authentication, bookmarks, reading history, reading progress, and synchronized user state.
- Built the web interface with React and the mobile application with Flutter while sharing backend services across platforms.

EDUCATION

CMR Engineering College

B.Tech in Computer Science & Engineering

2021 – 2025

Hyderabad, Telangana

ACHIEVEMENTS

Built and deployed multiple full-stack applications using Python backend frameworks, relational databases, and modern frontend technologies.

Developed backend services independently, including API design, database integration, authentication, caching, and third-party API integration.

Experience building applications across web, mobile, and AI/ML domains using Python-based backend technologies.
