## SUMMARY

---

Full Stack Developer with a strong focus on frontend and UI. I build responsive, production-ready web and mobile apps using React and Flutter on the frontend, backed by Flask and FastAPI on the server side. I care about how products look and feel as much as how they work — every project I've shipped has a clean, custom-designed interface built from scratch.

## SKILLS

---

**Languages:** Python, JavaScript, Dart

**Frontend:** React, Flutter, HTML, CSS, Tailwind CSS, Bootstrap

**Backend:** Flask, FastAPI, REST APIs, JWT Auth

**Databases:** PostgreSQL, Redis, Firebase

**Cloud & Tools:** Vercel, Render, Railway, Git, GitHub, VS Code

## PROJECTS

---

**Savlink** | *React, Flask, PostgreSQL, Redis*

🌐 Live    🐙 Code

- A personal web library to save, organize, and find links using folders, tags, and fast search.
- Built a responsive React frontend with Framer Motion animations, folder UI, tag-based organization, and real-time search.
- Built the backend in Flask with role-based access control, Redis caching, and a relational schema — deployed to production with no downtime.

**CineBrain** | *Flask, PostgreSQL, JavaScript*

🌐 Live    🐙 Code

- An entertainment platform that recommends movies, TV shows, and anime based on user preferences.
- Built a responsive frontend with custom CSS and Bootstrap; integrated TMDB API for media data and Cloudinary for image delivery.
- Recommendation engine using cosine similarity with sub-200ms response times via optimized SQL indexing.
- Secure JWT authentication, user review system, and clean error handling across the full stack.

**JustScroll** | *React, Flutter, FastAPI, PostgreSQL*

🌐 Live    🐙 Code

- A manga reader available on both web and mobile, with multi-source aggregation and reading progress sync.
- React web app with filtering and pagination; native Flutter mobile app with offline reading, light/dark themes, and Material 3 design.
- Swipe gestures, long-strip and single-page reading modes, bookmarks, and reading state synced across platforms via FastAPI.

## EDUCATION

---

**CMR Engineering College**

*B.Tech in Computer Science & Engineering*

2021 – 2025

Hyderabad, Telangana

## ACHIEVEMENTS

---

5+ production projects deployed across web and mobile.

Built every project end-to-end — from database design to UI — independently.

All projects are live and publicly accessible, not limited to local demos or GitHub repositories.

Comfortable working across the full stack — frontend, backend, and mobile application development.
